DIRECTORIES

DO'S

- Name after directory.
- Use logical names, meaningful to users that are simple to read and relevant.
- Use lowercase letters, number and - (dash) when naming files.

DO NOT'S

- Do not use spaces.
- Do NOT include any special characters such as: & , . () % # \$ % / \ { } [] < > ; @
- File names should not exceed 31 characters.

Quality Assurance Testing

Walk through the steps that should be taken for quality assurance: validation, link checking, accessibility testing, proofreading, etc. Include a graded support chart for browsers and devices.

When discussing standards in your development style guide, it should be clear that the standards outlined are not only industry-wide standards—they are also organizational standards that all developers should follow. Keeping development consistent goes hand in hand with keeping the design consistent, and should help make work more efficient and improve maintainability.

Version 1 - Percentage Complete

100%
